2GBR SOFTWARE PVT. LTD

Client: Target Corporation

Technologies: Databricks, PySpark, Python, SQL, AWS, MySQL, SQL Server, Apache Airflow, Azure DevOps

Project Overview:

Target is a leading U.S. retail organization with 1,800+ stores and a strong omnichannel presence, including e-commerce platforms. The project focused on building scalable data pipelines to process large volumes of transactional and customer behavior data.

- Built scalable ETL pipelines in Databricks using PySpark and SQL, processing 5M+ records daily with 30% improved availability.
- Built and maintained AWS S3-based Data Lake architecture integrated with Redshift and Athena for analytics
- Orchestrated 20+ production workflows using Apache Airflow, reducing manual effort by 40%
- Optimized large-scale distributed data processing using partitioning and Spark tuning techniques.
- Implemented automated data quality checks and monitoring framework.
- Optimized SQL queries and Spark transformations, reducing execution time by 25–30%.
- Collaborated with cross-functional teams to deliver reporting and analytical datasets
